Why Use A Flow Generator Device?

cpacket NETWORKS — VISIBILITY YOU CAN TRUST

- Unprecedented **Business Continuity** through service assurance and compliance
- Enhanced **Operational Efficiency** through deep network visibility & optimization
- Immediate **Return on Investment** through capex/opex savings and built-in value

Immediate Benefits

cPacket cProbe® Series Packet-to-Flow Converter

Reduce your opex by at least 30% or more

Network Detection Response

Detect security and performance issues proactively to counter threats and risks that bring down the business applications and network.

Network Traffic Analysis

Have progressive drill-down to network traffic intelligence associated with security IOCs by exporting flow data to SIEM.

Network Performance

Export network flow data to 3rd party flow-collectors and analytics engines or cPacket cClear® in Netflow/IPFIX format for analyzing end-to-end network performance.

Packet to Flow Data

Generate flow data from rich packet data consumed at 40Gbps and exported at up to 6 million flows-per-minute.
